

Aqua Chill Model K2348 Calcite Acidic Water Neutralizer

Aqua Chill's Alkaline filter is designed to re-mineralize your water. Reverse Osmosis systems remove both the good and bad elements in water. The Aqua Chill post alkaline filter is designed to give back minerals such as ionized calcium, magnesium and potassium ion, which were removed in the purifying process. This filter makes the water more Alkaline. Alkaline water is purported to increase your body's ability to hydrate. Many feel it gives your water a cleaner and crisper taste as well.

Operating Specifications

Calcite is a crushed and screened white marble media which can be used to neutralize acidic or low PH waters to a neutral, less corrosive effluent.

Capacity	6 months
Flow rate	1 GPM
Maximum Pressure	125 PSIG
Temperature	35-100 F (2-38-C)
